

Dashboard

The **Dashboard** provides you with a fresh canvas on which to arrange and present the tiles you have created in order to organize the information most relevant to you. By arranging tiles you can tell a single story or create a report that captures the scope of your analysis. Change the order of your tiles by simply clicking **Edit**, and drag and drop to your preference. You can also expand the number of columns in the layout by clicking the

icon,

and choose between 2, 3, 4, and 5 columns.

Tiles can be sent to the **Dashboard** from both **InCites System Reports** and the **Explorer**.

Click

the

icon

on any tile to see the information that sits behind it. From the options that appear, **View Data** to return to that tile's Explore Report Builder view; **Save a Copy** to save the tile to another report; and **Rename** or **Delete** the tile.

Share your **Dashboard** with other InCites users, so they can view your work and see updates to your analysis as you make them.
